

# CONSUMERS want a plan to fill their tanks NOT empty their wallets.

## CONSUMERS DESERVE AN ENERGY BILL THAT SAVES US MONEY AT THE PUMP AND GUARANTEES ADEQUATE ENERGY SUPPLIES.

If Congress enacts measures already passed by the House or Senate to increase vehicle fuel economy, expand environmentally sustainable bio-fuels, and generate renewable electricity, by 2020 we could:

- Save over \$180 billion on our gasoline bills;
- Slash foreign oil imports by over 120 billion gallons, stopping the growth of imports for the first time in over two decades;
- Reduce greenhouse gas emissions by over a trillion tons, which will save billions of dollars.

**Delay is a costly mistake. It's time for Congress to finish the job and give Americans a solid energy policy for a solid energy future.**
