

Dear madam/sir,

Wednesday 23<sup>rd</sup> June

Surveillance-based advertising permeates the internet today, creating a number of highly problematic issues for both consumers and for businesses. We are writing to you in order to ask for action on this issue on both sides of the Atlantic. In the EU, we urge you to consider a ban on surveillance-based advertising as a part of the Digital Services Act. In the US, we urge legislators to enact comprehensive privacy legislation.

We are a broad coalition of consumer rights organizations, civil rights groups, NGOs, and academics who share a number of concerns regarding the surveillance-based business model fuelling the majority of online advertising. In order to individualize and personalize digital advertising, we have seen the rise of a surveillance economy where everything consumers do is being tracked both online and offline, aggregated and shared.

The surveillance economy is sometimes erroneously presented as a trade-off, where consumers allow companies to track them in order to receive access to digital content. As the attached report by the Norwegian Consumer Council shows, a majority of consumers do not wish to be tracked online. However, the ubiquity of commercial surveillance means that it is practically impossible to avoid being tracked, profiled and targeted.

In addition to the clear privacy issues caused by surveillance-based advertising, systematic commercial surveillance also gives rise to and exacerbates a number of other problematic practices. As shown in the attached report, the surveillance-based advertising model facilitates systemic manipulation and discrimination, poses serious national security risks, funds disinformation and fraud, while also undermining competition and taking revenue away from content creators. This harms consumers and businesses, and can undermine the cornerstones of democracy.

Although we recognize that advertising is an important source of revenue for content creators and publishers online, this does not justify the massive commercial surveillance systems set up in attempts to “show the right ad to the right people”. Other forms of advertising technologies exist, which do not depend on spying on consumers, and cases have shown that such alternative models can be implemented without significantly affecting revenue.

There is no fair trade-off in the current surveillance-based advertising system. We encourage you to take a stand and consider a ban of surveillance-based advertising as part of the Digital Services Act in the EU, and the for U.S. to enact a long overdue federal privacy law.

Signed
